

Connect the Dots

Net-Centric IP Voice. Single-point Voice-over-IP is just part of the picture in today's increasingly complex networks. With DICES VoIP from Quintron Systems, transporting multiple audio links in a single, integrated IP path is child's play. Our innovative IP Trunk supports selectable quantities of discrete circuits between systems, including radio keying and telephone access. Using DICES VoIP client-server architecture, this system design supports complete end-to-end IP connectivity in one seamless package.

Call us today and learn how our DICES technology can help you better connect the dots.

DICES desktop operator station with multi-key talk/monitor circuit access via touch screen display
