

Do Your Mobile Communications Need an Update?

Stay Connected. In an increasingly mobile world, you need every possible option to ensure continuous connection with all mission groups. And with a clear direction towards IP-based links, using old-fashioned technology just won't fly. The Quintron DICES VoIP system offers the perfect solution for both problems! Our client-server architecture utilizes industry-standard IP with Ethernet or WiFi links and our innovative client provides operation on PDAs and cell phones supporting Java for truly mobile operations almost anywhere in the world.

DICES VoIP PDA user display provides access to nine different voice circuits through the central server, including radios and other phones.
