Congratulations

It's hard to believe 10 years have already gone by. It seems like only yesterday that our DICES mission voice service was helping launch the space shuttle with the parts to build you. And what a decade it's been. You've shown the world that men and women with diverse languages and cultures can come together for the sake of scientific discovery and common aspirations.

Quintron Systems, Inc. has been with you since the beginning. In fact, we've supplied advanced communications and services to the space industry since 1970. We're particularly excited about an upgrade we recently delivered to the NASA Marshall Space Flight Center that supports remote voice connections to researchers and scientists via the Internet and allows them to discuss their projects with NASA personnel—including astronauts aboard the International Space Station.

Quintron has been supporting space launches since 1970.

**Congratulations again on ten wonderful years.
Supporting you has been our pleasure.**

IP-based hazardous area keysets will be part of the next generation Quintron Systems launch support voice switch.
