

Break Free

- ① Database Independent
- ② OS Independent, and
- ③ From an Independent Supplier

3 Reasons Why Quintron Should Be Your Access Control Resource

It's time to provide a security system that works for everyone! With no restrictions. No specific database. No specific platform. Quintron's AccessNsite® Version 7 is a cross-platform (Windows, Unix, Linux, and Mac) and database independent modular access control solution. With AccessNsite, any facility, large or small, can be protected against unauthorized access.

So, break free from the restrictions typical in most security products and contact Quintron.
