

OUT OF THIS WORLD TECHNOLOGY AT A DOWN TO EARTH PRICE

Quintron VoIP Net-Centric Communications

The DICES VoIP System provides superior interoperable voice communications for control center personnel; with fault-tolerant client-server architecture; touch screen user keysets or Java software clients. Optional features include encryption for network security and local workgroup configuration settings for ultra-low system latency. Non-proprietary network connections and legacy audio interoperability via the DICES T1 Gateway complete the package.

DICES VoIP: the best solution for network C2 communications!

DICES VoIP desktop keyset: fully integrated design with touch screen access to intercom, radio and phone circuit types; plus multiple simultaneous talk/monitor key selection with no bandwidth increase and USB headsets with full PTT control.
