Quintron Supports Recent Delta IV Weather Satellite Launch

Santa Maria, CA (March 31, 2010) - Quintron Systems, Inc. (www.quintron.com), the recognized leader in advanced interoperable voice systems and physical access

control/intrusion detection systems, is pleased to announce that it supported the recent Delta

IV weather satellite launch from Cape Canaveral with several critical communications systems, including a DICES voice system used

by the launch pad and control room operators, closed-circuit television equipment used to

monitor numerous locations during rocket preparation and launch, infrared camera systems that monitor for leaks and fires on the hydrogen fuel tanks and fittings (hydrogen

flames are not visible in normal light), and a special high-speed television system to record critical areas of the rocket during initial launch phase.

“This was the last of three important launches deploying a new generation of weather satellites that will be used by meteorologists throughout the United States for

many years,” said David E. Wilhite, Quintron President and Chief Operating Officer. “We are proud to be part of the team and want to congratulate everyone involved.”

These three satellites are orbiting observatories, known as Geostationary Operational Environmental Satellites (GOES). They will provide enhanced imagery with constant observations of clouds, atmospheric conditions, and weather, enabling the better prediction of tornados, hurricanes, and other severe weather warnings.

About Quintron

For 40 years, Quintron has provided high technology and cost effective solutions to government and industry in support of mission critical communications and security requirements for command and control applications. No other company offers the depth of expertise found at Quintron in fault tolerant, interoperable communications, and security systems. In addition to providing advanced products and systems, Quintron’s professional technical services capability provides a superior level of customer satisfaction. Quintron’s engineering services provide off-the-shelf or customized engineering solutions to solve the toughest of challenges facing customers. Find out more about Quintron at www.quintron.com or by calling 805.928.4343.
