Quintron Systems Earns Mercury Security Platinum Partner Status

Santa Maria, CA (September 22, 2010) - Quintron Systems, Inc. (www.quintron.com), the recognized leader in advanced interoperable voice systems and physical access control/intrusion detection systems, today announces, as one of the founding Platinum Program members, renewal of its Mercury Security OEM partnership agreement initially established in 1998. "Quintron is one of Mercury's longest standing supporters and one of the original 6 Platinum Partners," said Richard Finnegan, vice president and general manager at Quintron. "We are proud to be able to continue to grow the relationship and provide the only cross platform solution in the market for all generations of Mercury Security control panels from the original serial-based panels to the latest IP-based panels."

"Mercury Security created the Platinum Partners Program in an effort to distinguish and reward our best and most deeply integrated business partners who continually demonstrate superior performance," said Frank Gasztonyi, CTO and Co-Founder of Mercury Security. "We have enjoyed a long and fruitful relationship with Quintron Systems and are proud to have Quintron among this elite group."

Quintron's AccessNsite® is a cross-platform (Windows, UNIX, Linux, and Mac) and database independent, integrated access, alarm, and video surveillance management system supporting all generations of Mercury Systems control panels. This unique software solution is scalable with a web-services API for third party application integration, web-based thin clients and high performance rich clients, and enhanced data filtering and reporting features including automated reporting and messaging via email. Also included are alarm graphics, linked live and historical event video, the ability to use any card reader type and associated credential technology from legacy magstripe to HSPD-12 compliant smartcards.

“We are extremely pleased to have earned this status with such a respected and prominent company in the industry,” added Finnegan. “Mercury Security is an important partner and our joint working relationship helps us maintain broad appeal to the largest segment of both existing access control systems and green field projects. Working side-by-side with other Mercury providers emphasizes the unique-to-Quintron open operating system and multiple database support capability of our AccessNsite solution.”

AccessNsite is installed in global facilities for mission critical security focused agencies and organizations, as well as an unidentified high tech end user HQ campus, regional data center, and global operations sites.
