### **Quintron Systems Featured in USA Today with VoIP Communications System**

Santa Maria, CA (July 7, 2009) - Quintron Systems, Inc. ([www.quintron.com](http://www.quintron.com)), the recognized leader in advanced interoperable voice systems and physical access

control/intrusion detection systems, is pleased to announce that its VoIP communications system

has been highlighted in a June USA Today article on VoIP technology (see the article at

[www.quintron.com](http://www.quintron.com) ). “For decades, we have

provided voice communication systems in

support of mission critical communications for

command and control requirements,” said David

Wilhite, Vice President and General Manager at

Quintron. “With our experience and the power

and widespread availability of VoIP, we can provide the same services as in past, more expensive system options at considerable savings.”

David Wilhite was approached for the coverage in USA Today because they were looking for new and unique applications of VoIP technology and felt that the Quintron VoIP product filled that requirement, especially in supporting interoperable communications service for Government and Corporate emergency and security operation centers. Quintron’s voice communications systems have supported major command and control centers for many years for rocket launch, range operations, satellite control, and battlefield simulation applications. These same features, coupled with VoIP technology for the overall system design, provide a unique combination of powerful user features to respond to and control emergency situations and also

- more -

integrate all other disparate audio sources, such as radios and telephones into the emergency operation center.

For more information about Quintron products and services, call 805.928.4343 or go to [www.quintron.com](http://www.quintron.com). The entire USA Today VoIP feature can be viewed at <http://mediaplanetreports.com/voip>.

### **About Quintron**

For over 39 years, Quintron has provided high technology and cost effective solutions to government and industry in support of mission critical communications and security requirements for command and control applications. No other company offers the depth of expertise found at Quintron in fault tolerant, interoperable communications, and security systems. In addition to providing advanced products and systems, Quintron's professional technical services capability provides a superior level of customer satisfaction. Quintron's engineering services provide off-the-shelf or customized engineering solutions to solve the toughest of challenges facing customers. Find out more about Quintron at [www.quintron.com](http://www.quintron.com) or by calling 805.928.4343.
